PRODUCT DESCRIPTION

Designer: Rudolph Schelling Webermann

Normann Copenhagen Dim LED Linear Suspension

The Normann Copenhagen Dim LED Linear was designed by Rudolph Schelling Webermann in 2023. This luminaire has been designed to cater to the different lighting requirements of modern families who use their dining tables for various activities. With the evolving role of dining tables in contemporary living spaces, the designer recognises that they are no longer just used for meals but also serve as gathering spots. The Normann Copenhagen Dim offers adaptability and functionality, providing versatile lighting options for today's homes.

Dim Linear Suspension is made of an aluminium panel that features two high-quality LED light strips above and below it. The light is suspended from the ceiling using two steel wires, an electric cord, and a steel canopy. You can control the brightness and colour temperature of the light by using the aluminium knobs located on each side of the panel, allowing you to easily personalise the lighting output. This beautiful linear light can be displayed in both domestic and corporate environments, available in two minimalistic finishes.
