PRODUCT DESCRIPTION

Designer: Sebastian Herkner

Vibia Class 2820 LED Outdoor Wall Light

Vibia Class 2820 LED Outdoor Wall Light takes inspiration from traditional gas lanterns, with a tall cylinder of fluted glass supported by a matt black aluminium wall mount. Designed by Sebastian Herkner, the light combines a relatively simple metal structure with a more decorative glass diffuser. The LED source sits behind an inner opal diffuser, producing a warm glow that passes through the grooves in the outer glass.

The upright design works particularly well beside entrances, along terraces, or on exterior walls next to outdoor seating. The fluted glass softens the light while giving the illuminated cylinder a more textured appearance. Class has enough presence to work individually beside a doorway, although it can also be installed in pairs or repeated along a larger wall. The contrast between the black metal and translucent glass is especially noticeable when illuminated after dark.

Class 2820 is finished in Black and uses a warm 2700K integrated LED. The fitting has an IP65 rating for outdoor use and is available with Casambi wireless dimming, allowing the light to be controlled as part of a compatible Casambi system. This version uses a remote electrical connection, which should be considered when planning installation. The wider Class collection also includes freestanding outdoor lights with the same combination of fluted glass and black metal. Most suited to entrances, patios, terraces, balconies, garden walls, courtyards, and outdoor hospitality areas.

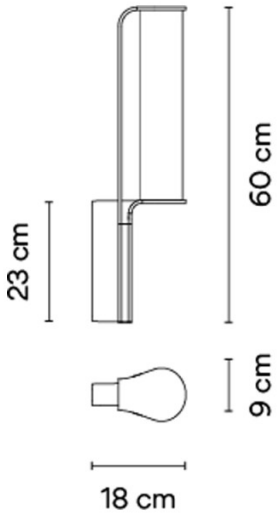

PRODUCT SPECIFICATION

Light Source: 3.5W, 2700K, 332 Lumens

IP Code: 65

Dimming: Dimmable via Bluetooth with the Casambi app.

Dimensions: Height: 60cm
Width: 9cm
Depth: 18cm
Wall Mount Height: 23cm
