PRODUCT DESCRIPTION

Designer: Holscher Design

Vibia Pro 7034 Trim LED Recessed Ceiling Spotlight

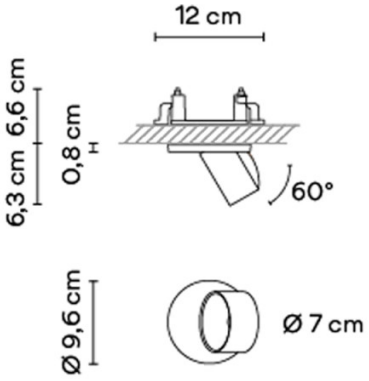

The Vibia Pro 7034 Trim LED Recessed Spotlight is the smaller wide-beam ceiling fitting in Holscher Design's Pro collection. Its aluminium body consists of two connected cylindrical sections, with the adjustment mechanism concealed inside. The 7cm spotlight head can be turned and tilted, directing a 54° beam over a relatively broad area. A narrow trim remains visible around the ceiling opening, and the fitting is available in Black, Warm White, and Beige M1.

Several Pro 7034 spotlights could be installed above a kitchen worktop or island, with each head angled towards the area below. They are also useful along a hallway, particularly where pictures or other features are positioned on one side and need lighting from the ceiling. In a living room, the wide beam can be directed towards shelving, furniture, or a wall without requiring a larger spotlight.

The integrated LED provides warm-white light at 3000K, with DALI-2 dimming available when connected to a compatible control system. This version is recessed into the ceiling with a visible trim around the opening. Other sizes and beam options are available within the Pro collection, allowing different spotlights to be used together while keeping a consistent appearance. Most suited to kitchens, hallways, living rooms, and display lighting.
