Astro Nomad Lantern Outdoor LED Wall Light

Astro Nomad Lantern Outdoor LED Wall Light is a mains-powered exterior lantern with a Textured Black aluminium body and an integrated LED light source. Rather than using an exposed bulb like a traditional wall lantern, Nomad directs its light downwards, reducing the amount of light escaping into the sky. The fitting has a defined, angular shape that projects from the wall, with the light source positioned within the structure. Astro describes the design as dark-skies compliant, making its controlled light distribution an important part of the product.
The Nomad Lantern is particularly useful beside a front door, where the downward light can illuminate the entrance and the ground immediately below. It could also be installed along an exterior walkway or around a courtyard, with several fittings positioned along the wall to provide lighting at regular intervals. Its Textured Black finish works well against brick, stone, and rendered walls, while the warm LED gives the fitting a softer appearance when illuminated.
Nomad is hardwired and rated IP65 for outdoor use, with an integrated LED that can be dimmed using a compatible leading or trailing edge dimmer. The aluminium body is designed for exterior installation, although Astro specifies that this product is not suitable for locations within five miles of the coast. The Nomad collection also includes bollards, portable lamps, and a separate wall light. Most suited to entrances, porches, patios, terraces, exterior walkways, courtyards, and residential or commercial outdoor spaces.

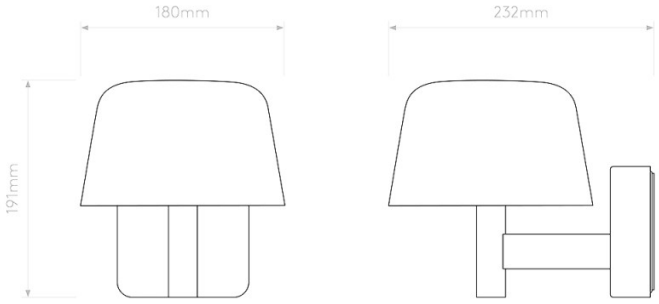

PRODUCT SPECIFICATION

Light Source: 13W, 2700K, 311 Lumens

IP Code: 65

Dimming: Dimmable using leading edge and trailing edge.

Dimensions: Height: 19.1cm
Width: 18cm
Depth: 23.2cm
