PRODUCT DESCRIPTION

Designer: Jordi Vilardell

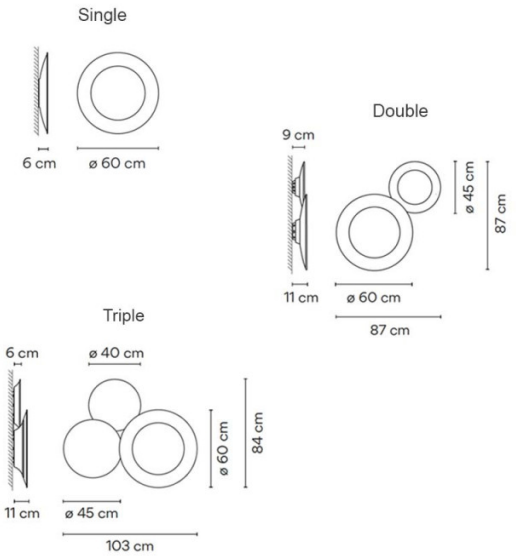

Vibia Puck Wall Art

Unlike the previous Puck model, Puck Wall Art is made from polycarbonate and aluminium instead of opal glass - making this range more durable. These lights provide exceptional indirect lighting and create warm circles of light and a harmonious atmosphere in your space, thanks to the integrated LED strip. The Puck Wall Art collection comprises single discs in various sizes or two or three overlapping discs. In this way, it is possible to create interesting light fixture groups and individual arrangements.

It is possible to connect up to 8 Puck Wall Art modules to a single wall outlet. For larger arrangements, you will require a connection system. The individual and made formations can fit together to create a completely unique installation, using up to 40 Pucks in one display! This collection is available in a range of colours and surfaces. There are discreet colours and high-quality felt textile for additional comfort. Some are even available in premade arrangements to allow you easy customisation.
