**LUCE
PLAN**

Luceplan Fly-Too Wall. An ultraflat luminous disk, adjustable by 360° in space, to be placed in infinite positions. Fly-too is an LED wall lamp with an innovative optical system that generates perfect bi-directional floodlighting.

Light sources are positioned in the extruded anodized aluminium of the outer ring. They project their light inside a very sophisticated optical element specially developed by Luceplan. The methacrylate lens, featuring a lenticular system with recovery of marginal light flow, is organized in two joined disks. The internal face has a Fresnel lens that amplifies light intensity, while the outer surface has a microsphere texture capable of increasing the bi-directional "flooding" of the light. The joint connects the body of the lamp to the vertical post containing the technical components.

Dimensions:

Height 48cm

Base Width 5.5cm

Total Width 20.5cm

Colour: Aged White with Aged White

Aged White with Tanned Skin

Ultramat Black White aged White
