Astro Borgo Trimless LED Recessed Light

The Astro Borgo Trimless LED Recessed Light is a discreet recessed wall light designed to sit flush within the wall for a clean, architectural finish. Available in two formats, the narrow rectangular Borgo Trimless 35 and the square Borgo Trimless 65, this collection is ideal for projects that need subtle low level lighting without interrupting the surface of the wall.

Both versions feature an integrated 2W LED light source with a warm 3000K colour temperature, making them well-suited to staircases, corridors, hallways and other circulation spaces. The different shapes allow you to choose the most suitable proportion for the setting, whether you want a slimmer vertical detail or a more compact square form. Rated IP20, Borgo Trimless can also be used in bathrooms, strictly within zone 3.

These recessed wall lights require a constant current 700mA driver and are dimmable when used with compatible control gear. They must be installed before the final plaster skim, and no back box is required for solid wall installation, making them a practical choice for integrated architectural lighting schemes.

Please note, requires a 700mA constant current driver, not included. Drivers differ depending on how many lights you want to install and whether you need them to be dimmable or not. Please contact us for more information and pricing

This product must be installed before the final plaster skim.
