PRODUCT DESCRIPTION

Designer: Anna Castelli Ferrieri

Kartell Componibili Bio

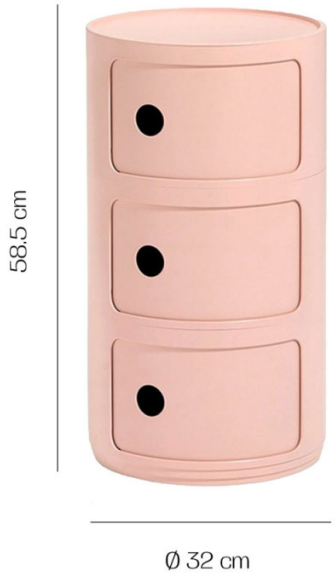

The Kartell Componibili Bio is made from a material derived from agricultural production waste. This is the first product by Kartell as part of their Bio Project and is 100% natural and plastic-free. Kartell, in collaboration with Bio-on, has worked for years on creating a sustainable material to use for their products that protects the environment. Kartell Componibili Bio is completely recyclable and Greenguard certified.

The process to create this material starts with food waste, which is then attacked by microorganisms that break it down into a biomass resembling plastic. Then, through a series of processes, the material will be refined and turned into the highest quality. Kartell experimented with using this new material in injection and moulding for their products.

The biodegradable version of the Kartell Componibili storage unit is available in a 3-module version and in 4 pastel colours (yellow, green, pink or taupe). As with the rest of the **Componibili Collection**, you can stack them on top of each other and create different-sized storage units. The iconic design by Anna Castelli Ferrieri is a flexible and multi-functional storage unit to cover your every need and to be used in every room of the house.

PRODUCT SPECIFICATION

Dimensions: Ø32cm
Height: 58.5cm
