PRODUCT DESCRIPTION

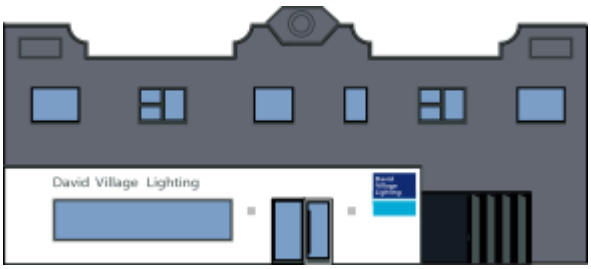

Laser Cube Wall Light by Lodes

The Laser Cube wall light is a functional and elegantly simple wall lamp that is constructed by metal. Emitting a downward and upward light, the inside of the lampshade is made in a way so the light will stay flush to the wall, producing an indirect, far-spreading light. Available with a built-in LED that emits a 3000K (warm white) or a softer 2700K (warmest white) colour temperature, this wall lamp is both energy-saving and long lasting.

The Laser Cube wall lamp is dimmable so you can create the right atmosphere and is available in a cube shape (10x10), so you can have the right fit for your space. Perfect for big projects and spaces, this wall light can be used in both the home and commercial spaces to create a bright or ambient room. The 2 colours available means you can find the right finish to match your interior and the versatility of this LED wall lamp makes it the right purchase for you.
